Project GoodMan

Powered by CoinHive (https://coinhive.com/)

What is Project GoodMan ?

Project GoodMan is a browser extension that mines Monero Cryptocurrency from User's CPU Power. Mined crypto from user's browser is donated to build schools and distribute books to/for weaker sections of society. Project GoodMan aims to present every member of society with better reach to education, thus helping to eradicate poverty to some extent,

How Project GoodMan works ?

Project GoodMan functions in three simple steps:

- Install our extension -- All browsers supported
- GoodMan extension starts mining Monero with every new Session (User is provided with option to stop mining)
- Mined Crypto is credited to Project GoodMan's Crypto Wallet
- Donations are made to build schools, distribute books and more...

Project GoodMan's Technology Stack ?

- For mining Monero – CoinHive
- Browser Extension Interface – HTML5, CSS3, Vanilla JavaScript
- User Statistics Collection and Visualization – REST APIs, Django, PostgreSQL, Gunicorn, NGINX

Some Statistics

- Huge Potential with Mobile Device Users, integrating GoodMan extensions with Mobile Browsers can make a huge impact. `4.68 BILLION` mobile users present worldwide!
- `3.2 BILLION` active users with Internet Connection worldwide.
- `560 MILLION` active internet users in India alone.

About this Project

This proposal is for Project GoodMan drafted to participate in HACKMSIT_2019 organized by IOSD. Team Members :
